

Inkomens

```
graph TD; A[Inkomens] --> B[Primair]; A --> C[Secundair]; B --> D[Inkomen voor belasting]; D --> E[Lorenzcurve boller]; C --> F[Inkomen na belasting en uitkeringen]; F --> G[Lorenzcurve minder bol];
```

A flowchart illustrating the classification of income and its impact on the Lorenz curve. At the top is 'Inkomens', which branches into 'Primair' and 'Secundair'. 'Primair' leads to 'Inkomen voor belasting', which results in a 'Lorenzcurve boller' (more convex). 'Secundair' leads to 'Inkomen na belasting en uitkeringen', which results in a 'Lorenzcurve minder bol' (less convex).

Primair

Secundair

Inkomen voor belasting

Inkomen na belasting en uitkeringen

Lorenzcurve boller

Lorenzcurve minder bol
